```java
package de.preclipse.bo;

import java.util.Date;
import org.prevayler.TransactionWithQuery;

public class SalaCreateTransaction implements TransactionWithQuery {

    private static final long serialVersionUID = 1L;
    private int codigo;
    private String nome;
    private int capacidade;

    public SalaCreateTransaction(int siape, String nome, int
capacidade) {
        this.codigo = siape;
        this.nome = nome;
        this.capacidade = capacidade;
    }

    public SalaCreateTransaction() {
    //default constructor needed for xml serialisation
    }

    public Object executeAndQuery(Object prevalentSystem, Date
executionTime) throws Exception {
        return ((PrevalentSystem)prevalentSystem).addSala(codigo,
nome, capacidade);
    }

}
```
